Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

6) ☐ Other: _____.

DETAILED ACTION

1. This communication is responsive to the amendment filed on June 02, 2005. Claims 1, 5, and 7-8 were amended. Claims 6-11 are newly added. Claims 6-11 were not originally rejected in the last Office Action mailed on March 2, 2005 because the second pages of claims (namely claims 6-11) was not scanned in. Claims 1-11 are presented for examination.

Claim Rejections - 35 USC §102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

3. Claims 1-11 are rejected under 35 U.S.C. 102(e) as being anticipated by **Murakawa U.S. Patent Application Publication No. U.S. 2001/0020273.**

4. As to claim 1, Murakawa teaches a method of sending a packet from a first IPsec client to a second IPsec client, comprising the steps of:

receiving at a non-proprietary format tunneling protocol server from the first IPsec client an IPsec packet mapped in the non-proprietary tunneling format (see Fig. 1, Page 3, paragraph [0071]);

creating a non-proprietary format tunneling protocol tunnel to the second IPsec

client through the non-proprietary format tunneling protocol server (see Fig. 1, Page 3, paragraph [0072]);

establishing a security association between the first and second IPsec clients via the non-proprietary format tunneling protocol server (see Fig. 1, Page 3, paragraph [0072]);

transmitting the packet through the non-proprietary format tunneling protocol tunnel to the second IPsec client whereby the packet remains unaffected by any address translation or firewall traversal that may occur during transmission (see Fig. 1, Page 3, paragraph [0071]-[0075]).

5. As to claim 2, Murakawa teaches the method according to claim 1 wherein the non-proprietary tunneling protocol comprises a Layer-2 Tunneling Protocol (L2TP) protocol (see Fig. 1, Page 3, paragraph [0066]-[0067]).

6. As to claim 3, Murakawa teaches the method according to claim 2 wherein the receiving step includes the steps of:

opening an L2TP tunnel between the first IP client and the server; and communicating an IPsec packet wrapped in an L2TP format to the server (see Fig. 1, Page 3, paragraph [0071]-[0075]).

7. As to claim 4, Murakawa teaches the method according to claim 2 wherein the receiving step includes the step of routing an IPsec packet wrapped in an L2TP format to the server via a public address (see Fig. 1, Page 3, paragraph [0071]-[0075]).

8. The method according of claim 4 wherein the public address is supplied from the server to the first IPsec client (see Fig. 1, paragraph [0068]-[0075]).

9. As to claim 6, Murakawa teaches the method according to claim 5 wherein the step of creating a non-proprietary format tunneling protocol to the second IP sec client includes the step of providing to the second client a public address identifying the server (see Fig. 1, paragraph [0068]-[0075]).

10. As to claims 7-11, they contain similar limitations as in claims 1-6, therefore they are rejected under the same rationale.
